

FIELD SERVICE WORKORDER OPTIMIZATION

Date	20-06-2025
Team ID	LTVIP2025TMID29619
Project Name	Field Service WorkOrder Optimization
Maximum Marks	

CHAPTER 2 IDEATION PHASE

Ideation Phase

This phase focuses on generating, evaluating, and refining ideas that will shape the optimization solution. It's a collaborative effort involving stakeholders from operations, IT, customer service, and field technicians.

Outcome of Ideation Phase

- A shortlist of validated ideas ready for design and development
- Clear understanding of user needs and business goals
- Alignment among stakeholders on project direction

2.1-Problem Statement

Field service organizations face persistent challenges in managing and executing work orders efficiently. Manual scheduling, poor resource allocation, and lack of real-time visibility often led to increased operational costs, technician downtime, delayed service delivery, and reduced customer satisfaction. The absence of intelligent systems to optimize work order assignment and execution results in missed service-level agreements (SLAs), inefficient use of field personnel, and limited scalability.

Core Issues

- Inefficient Scheduling:** Assignments are often made without considering technician location, skill set, or availability.
- High Operational Costs:** Excessive travel time, overtime, and underutilized resources inflate expenses.
- Limited Visibility:** Dispatchers and managers lack real-time insights into job progress and technician status.
- Customer Dissatisfaction:** Delays and missed appointments erode trust and loyalty.
- Reactive Maintenance:** Lack of predictive tools leads to breakdowns and emergency repairs.

2.2-Empathy Map Canvas

FIELD SERVICE WORKORDER OPTIMIZATION

Empathy Map Canvas tailored for a Field Service Work Order Optimization project. This tool helps you understand the technician's experience and needs, so you can design a solution that truly supports them.

Empathy Map

2.3-Brainstroming

brainstroming session for your Field Service Work Order Optimization project. This is where creativity meets strategy

Innovation Ideas

- AI-Powered Dispatch Engine Automatically assigns jobs based on technician location, skill set, and urgency.
- Voice-Activated Technician Assistant Hands-free updates and instructions using smart devices.
- Gamification Dashboard Reward technicians for efficiency, first-time fixes, and customer ratings.
- Augmented Reality (AR) Support Use AR for remote guidance or equipment diagnostics.
- Tech Enhancements

FIELD SERVICE WORKORDER OPTIMIZATION

- Offline Mobile Mode Allow technicians to access and update work orders without internet.
- Predictive Maintenance Alerts Trigger work orders based on IoT sensor data before breakdowns occur.
- Dynamic Routing Algorithms Adjust technician routes in real time based on traffic and cancellations.
